Since prehistory humans have noticed the stars, of course. Over the course of a human life-time and even many generations don't seem to move much, except for the daily westward overall circling and the much slower overall motion due to the precession of the equinoxes. Both daily circling and precessions are physically caused by the motions of the Earth, of course---but this was not understood ...

In physics, a free surface is the surface of a fluid that is subject to zero parallel shear stress, such as the interface between two homogeneous fluids, for example liquid water and the air in the Earth's atmosphere. Unlike liquids, gases cannot form a free surface on their own. Fluidized/liquified solids, including slurries, granular materials, and powders may form a free surface.
