Cabin air pressure. Although aircraft cabins are pressurized, cabin air pressure at cruising altitude is lower than air pressure at sea level. At typical cruising altitudes in the range 11 000–12 200 m (36 000–40 000 feet), air pressure in the cabin is equivalent to the outside air pressure at 1800–2400 m (6000–8000 feet) above sea level.

Introduction. The Sun is a medium-sized star in the center of our solar system that is a powerful and continuous source of energy. The Sun produces 3.8×10^{26} watts (W) of power and 1.4×10^{31} joules (J) of energy every hour. On a clear day at sea level, when the Sun's rays hit perpendicular to the Earth's surface, the Earth receives 1000 watts per square meter (W/m^2) of solar radiation.
