Body hair, or androgenic hair, is the terminal hair that develops on the human body during and after puberty. It is differentiated from the head hair and less visible vellus hair, which are much finer and lighter in color. The growth of androgenic hair is related to the level of androgens (often referred to as male hormones) and the density of androgen receptors in the dermal papillae.

Abundant in the southeast, scarce in the southwest is this broad-winged scavenger. In low flight, it proceeds with several quick flaps followed by a flat-winged glide; when rising thermals provide good lift, it soars very high above the ground. Usually seen in flocks. Shorter wings and tail make it appear smaller than Turkey Vulture, but looks are deceptive: body size is about the same, and ...
