Jack, an instructor at Columbia Business School, taught his online entrepreneurship course asynchronously through his institution LMS. He was interested in incorporating a Wiley business text into his course, but wanted to deliver this Wiley content seamlessly with his own reading materials and video content.

In physics, a force is any interaction that, when unopposed, will change the motion of an object. A force can cause an object with mass to change its velocity (which includes to begin moving from a state of rest), i.e., to accelerate. Force can also be described intuitively as a push or a pull. A force has both magnitude and direction, making it a vector quantity.

### Force - Wikipedia

In statistical mechanics, entropy is an extensive property of a thermodynamic system. It is closely related to the number  $\Omega$  of microscopic configurations (known as microstates) that are consistent with the macroscopic quantities that characterize the system (such as its volume, pressure and temperature). Under the assumption that each microstate is equally probable, the entropy is the natural ...

### Entropy - Wikipedia

Force (from Latin: *vis*) is the push or pull on an object with mass that causes it to change its velocity. Force is a vector quantity, having both magnitude and direction. The magnitude of force can be measured by the acceleration it produces on a mass. Force is also the time rate of change of momentum. Force is also the negative of the work done by a conservative field. Force is the negative of the gradient of potential energy.

Filosofier i antikken, inkludert Aristoteles og Arkimedes, anvendte begrepet kraft i studiet av stasjonære og bevegelige gjenstander. Imidlertid hadde de grunnleggende feil i sin forståelse av fenomenet. Delvis skyldes dette ufullstendig forståelse friksjon, som ikke alltid er en åpenbar kraft, og dermed utilstrekkelig syn på årsaken til naturlige bevegelser.
