Adjust the levels of clothing, perspiration, and exercise to maintain a stable internal temperature as the external temperature changes. Water and blood sugar levels need to be replenished regularly, and fatigue occurs with heavy exercise. Severe hypothermia, heat stroke, or dehydration can result if internal stability is not maintained.

### **Human Homeostasis Gizmo tutorial**

Homeostasis is the ability of the human body to maintain its internal environment at equilibrium, or in other terms, to keep the body at a constant temperature. This ability is regulated by the circulatory systems, endocrine systems, and the nervous system, because of how they organize the various functions in the human body's system.
