In Graphing Linear Equations, when I was discussing linear equations, I explained why it was important to draw graphs. Since linear equations contained two variables, usually x and y , there were an infinite number of ordered pairs that made each equation true. Because you couldn't write that infinite list of answers, it was useful to represent them with a drawing (graph) of the solutions.

In fact, any ordered pair of the form $(x, 2)$ is a solution of (1). Graphing the solutions yields a horizontal line as shown in Figure 7.4. Similarly, an equation such as $x = -3$ can be written as $x + 0y = -3$ and can be considered a linear equation in two variables where the coefficient of y is 0.
