all primates have opposable thumbs (human hand is capable of doing more movements). human brain case has more volume and mass than other primates. humans are bipedal(walk on two limbs). aka, adaptations from natural selection

### **Comparing Primates Flashcards | Quizlet**

Instead, the activities here focus around humans and their evolutionary relationship with other primates. Students will compare hand structure, the overall skeleton, cranial capacity of the skull, and the DNA sequence that produces the hemoglobin molecule of humans, gorillas, chimpanzees, and other primates.

### **Evidence of Human Evolution Worksheet Set**

Hominids, which include humans and closely related primates, are members of the human family known as Hominidae. Although these early hominids were not yet humans, they did take evolutionary paths that distinguish them from other hominoids. During their evolution, many changes have occurred to the basic skeleton of these hominids.
