As I note in my answer, rolling your own round has a lot of caveats. Before C++11, the standard relied on C90 which did not include round. C++11 relies on C99 which does have round but also as I noted includes trunc which has different properties and may be more appropriate depending on the application. Most answers also seem to ignore that a user may wish to return an integral type which has ...

In mathematical terms if then the differential is and the integral is where C is the so called 'constant of integration'. In both cases there is a phase shift of 90° which turns the sine into a cosine. The differential is multiplied by . The integral is divided by , is also negated and has had an offset added to it, which in this case is half the resultant amplitude, resulting in the ...
