Pearson - The Biology Place

This lesson is designed to be accomplished in two 90-minute blocks with the groups working simultaneously at the seven stations for about 20 to 25 minutes each.

Adaptation and Evolution

Heredity - Chromosomal aberrations: The chromosome set of a species remains relatively stable over long periods of time. However, within populations there can be found abnormalities involving the structure or number of chromosomes. These alterations arise spontaneously from errors in the normal processes of the cell. Their consequences are usually deleterious, giving rise to individuals who ...

Heredity - Chromosomal aberrations | Britannica.com

A wing is a type of fin that produces lift, while moving through air or some other fluid. As such, wings have streamlined cross-sections that are subject to aerodynamic forces and act as airfoils. A wing's aerodynamic efficiency is expressed as its lift-to-drag ratio. The lift a wing generates at a given speed and angle of attack can be one to two orders of magnitude greater than the total drag ...

Wing - Wikipedia

So, how do the thick and thin filaments generate muscle contraction? The attraction between the myosin head and the myosin-binding site of actin are strong enough that the bond can form spontaneously.

Muscle Contraction: Actin and Myosin Bonding - Video ...

The five linked pages introduce to the concept of a chemical bond and why atoms bond together, types of chemical bonds and which electron arrangements are particularly stable leading to stable chemical bonds. Through the use of dot and cross electronic diagrams is described and there are detailed notes on ionic bonding i.e. the mutual attraction of oppositely charged ions to give ionic bonds ...
