How Populations Evolve Answers

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

A creole language, or simply creole, is a stable natural language that develops from the simplifying and mixing of different languages at a fairly sudden point in time: often, a pidgin transitioned into a full-fledged language. While the concept is similar to that of a mixed or hybrid language, a creole is often additionally defined as being highly simplified when compared to its parent languages.

Mutation As noted earlier, many biologists once thought that mutation by itself was the major cause of evolution. In the 1920s, however, British biologist J. B. S. Haldane (1892–1964), British statistician Ronald A. Fisher (1890–1962), and American geneticist Sewall Wright (1889–1988) published three different mathematical proofs showing that mutation by itself is insufficient.
