Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration (a=0), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

In classical mechanics, impulse (symbolized by J or Imp) is the integral of a force, F, over the time interval, t, for which it acts. Since force is a vector quantity, impulse is also a vector in the same direction. Impulse applied to an object produces an equivalent vector change in its linear momentum, also in the same direction. The SI unit of impulse is the newton second (N·s), and the ...

De facto, sempre que dois objetos diferentes entram em contato muito próximo, passam eletrões dos átomos de um dos objetos para o outro. O objeto que for mais susceptível a perder eletrões ficará eletrizado com carga positiva (n protões a mais) e o objeto que for menos susceptível a perder os seus eletrões ficará com a mesma carga, mas negativa (n eletrões a mais).

Rullmotstånd, som ibland kallas rullfriktion, är det motstånd som uppstår när ett runt föremål såsom en boll eller ett däck rullar på en plan yta.Det orsakas främst av deformation av föremålet (hjulet) och/eller underlaget. Ytterligare bidragande faktorer är hjulets radie och dess fart framåt [1] samt vidhäftning och slip mellan ytorna.
