I'm not a physicist but I think mass and inertia are not the same thing. They are obviously related but they are different entities. Mass is the measure of the amount of matter an object has and inertia is the resistance an object "makes" to changes in its motion state (if an object is at rest or moving with constant speed, it'll stay that way unless a force is applied to it).

In a physics lab experiment for the determination of moment of inertia, a team weighs an object

and finds a mass of 2.81 kg. They then hang the object on a pivot located 0.154 m from the object\'s center of mass and set it swinging at a small amplitude. As two of the team members carefully count 109 cycles of oscillation, the third member measures a duration of 237 s.

Explain your answer. Objects on the spaceship would still have mass and be able to exhibit the same degree of inertia as they exhibit on Earth. While their weight (a gravity thing) will be significantly diminished, their mass and tendency to resist a disruption from their state of motion will be just the same as on Earth. 5.
