An nth-rank tensor in m-dimensional space is a mathematical object that has n indices and m^n components and obeys certain transformation rules. Each index of a tensor ranges over the number of dimensions of space. However, the dimension of the space is largely irrelevant in most tensor equations (with the notable exception of the contracted Kronecker delta).

In mathematics, a Sobolev space is a vector space of functions equipped with a norm that is a combination of L p-norms of the function itself and its derivatives up to a given order. The derivatives are understood in a suitable weak sense to make the space complete, thus a Banach space.Intuitively, a Sobolev space is a space of functions with sufficiently many derivatives for some application ...
