In mathematics, the elasticity or point elasticity of a positive differentiable function f of a positive variable (positive input, positive output) at point a is defined as = ´ ()= → − − = → − () − = → − () − ≈ % % or equivalently = .It is thus the ratio of the relative (percentage) change in the function's output () with respect to the relative change in its input ...

Elasticity of substitution is the elasticity of the ratio of two inputs to a production (or utility) function with respect to the ratio of their marginal products (or utilities). In a competitive market, it measures the percentage change in the ratio of two inputs used in response to a percentage change in their prices. It measures the curvature of an isoquant and thus, the substitutability ...
