Java Answer Key
If you choose to use the Commons Collections library instead of the standard Java Collections API, you can achieve this with ease.. The BidiMap interface in the Collections library is a bi-directional map, allowing you to map a key to a value (like normal maps), and also to map a value to a key, thus allowing you to perform lookups in both directions. . Obtaining a key for a value is supported ...

On Windows, why java -version return Error: opening ...
My Java browser plug-in is no longer working. When I open a page that has a Java element, Java cannot connect to the server. After investigation, I found that Java was trying to use IPv6, while my network does not support IPv6, so Java always fails to connect.

windows - How to force Java to use IPv4 instead IPv6 ...
All objects have both identity (the object's location in memory) and state (the object's data). The == operator always compares identity. The default implementation of equals compares identity as well.. Sometimes the default implementation of equals has the desired behaviour (as in a type-safe enumeration, for example), but equals should usually compare state, not identity.

Java Practices->Implementing equals

Sorting array is a day-to-day programming task for any software developer. If you have come from Computer Science background then you have definitely learned fundamental sorting algorithms like the bubble sort, insertion sort, and quicksort but you don't really need to code those algorithms to sort an array in Java because Java has good support for sorting different types of array.
