From Problem 11 we have computed the individual probabilities for various sum of two random die. Following the hint, let Ei be the event that the initial die sum to i and that the player wins. We can compute some of these probabilities immediately P(E2) = P(E3) = P(E12) = 0, and P(E7) = P(E11) = 1. We now need to compute P(Ei) for i = 4,5,6,8,9,10.
